## August 2025

## Garden Master's Message

**Hello everyone,**

Four months in and there's so much to be grateful for. This garden is a labor of love and it shows every time we gather. The conversations we have, the laughs we share, and the way everyone pitches in to keep it running together on a common goal. If you want to get the most out of this garden, you have to be willing to put in the work. And it's clear that you all are and we appreciate you for that. As Gill, I will continue to listen and learn from you.

And at some point, we'll stop discovering yet another person who had a hand in getting assigned to them years ago (this month I learned of two more such people).

**Hot and dry**

It's August, arguably the hottest and driest month of the year. The weather has an impact on OVF administration. For one, a fun Sunday afternoon in August is perhaps not the most appealing time to be toiling at a workday. Also, the garden tends to be a bit quieter as many people are away for part of the year. (Feel free to tuck the hint and come to the August 31 workday – there's lots to do.) Second, the OVF water bill goes up substantially in July, August, and September. In 2024, the OVF water bill totaled $4,000 for approximately 8000 ccf (hundred cubic feet) approximately $5,000 in August. Now is the time to think about how you water, and to keep an eye out for leaks in the garden.

**Watties Farm had a 50th birthday**

If OVF has a sister garden, it's Watties Farm. We have a shared origin story, dating back to the 1970s and LA Mayor Tom Bradleys' community garden initiative. Watties Farm celebrated its 50th birthday on July 26th. Both are located on LA City-owned land and administered by the LA Department of Recreation and Parks under very similar operating agreements. We share a purpose and a determination – we are the two largest and oldest left-run organic community gardens in Los Angeles.

This month, Watties celebrated its Golden Jubilee. It's open as a community garden. I visited Watties for its 50th year celebration and enjoyed the festivities. It's a beautiful garden and a very special place. And it was a lot of fun, with garden tours, a live band, a magic show. There's something joyous about gardeners getting together to celebrate in their garden.

We can learn from Watties and their experience. Because we have so much in common, I believe we should grow closer as a community. Longterm to our fellow community gardens, like the awesome Watties Farm.

**At has some thoughts**

As the new Garden Master, I continue to reach out to members for input and insights. A member suggested that we could help, so I asked At to draft a garden master newsletter article, and it popped out a pretty functional truck, which (according to At) is "friendly, informative, and encourages engagement."

Here's what it said: "As summer begins to wind down, our community garden is buzzing with life - thanks to your continued care and commitment. From vibrant tomatoes to leafy greens, sunflowers, and so many beautiful harvests. Tomatoes, peppers, cucumbers, beans, and squash are coming in strong. If you've got a surplus, don't forget about our Free Table! Bring what you can share and take what you need. Shout-Outs! Mornings and evenings are best to minimize evaporation. Prep for Fall: Now's a great time to start planting cool-season crops like kale, lettuce, and radishes."

The At, while a bit hyperbolic, got the gist. August is a transition month, still hot and still harvesting, but prepping for fall.

As the At says, "Happy Growing," and I'll see you in the garden.

Lea Hamrell
OVF GM

## OVF Calendar

| Work Days | General Meeting | Board Meeting |
|---|---|---|
| Same each day<br>Sunday 1pm-4pm<br>August 31<br>Saturday 9am-noon<br>September 13 | October 11<br>1:00 pm<br>(Pull Look at 12:00) | September 20<br>9:30 am |

**Full Calendar**

## Upcoming Events at OVF

*(All events are held at the main OVF meeting area unless otherwise stated.)*

Sept. 7, 1pm OVF Native Plant Cacti Succulent Sale

Sept. 7, 2pm Garden Master office hour at OVF office

Sept. 13, 9am Garden Master office hour at OVF office

Sept. 20, 1pm Garden Master office hour at OVF office

Sept. 28, 9am Garden Master office hour at P1, just MIB

## Workgroup Profile

### Recycling with Nancy Howell

The Alejos pine tree is an Ocean View Farms landmark, anchoring the center of the garden, with its nearby spaces, office and bulletin. It's the perfect place to meet and greet. Nancy Howell is one of the first members at OVF a more familiar with that Alejos pine tree than Nancy Howell who – along with OVF gardener Mimi Thayer – planted it. Nancy planted numerous trees throughout the garden, and she's also demonstrated the keen eye and nose for stewarding and mulching. The one that remains is a standout from OVF's earliest days.

Nancy, who is in charge of the Recycling workgroup, is one of OVF's longest-standing members. She's a "Day 1" member, and she's been with OVF through all the ups and downs. "There were no rules, no money and no assigned tasks." But, as OVF expanded four times to achieve its current six acres, 550-plus plots, and 1,000-plus members, Nancy's been there for it all. The recycling workgroup. "We recorded how buses and someone had the idea of making money by recycling." Soon after, OVF pioneer Ed Monsen (Garden Master 1979-1980) got the City to provide a recycling bin. Nancy's first recycling campaign was a success, and it's still a success. In 2020, for example, recycling brought in over $1,020.

The recycling bin can be tricky to find for anyone new to the garden. It's up the hill, behind the bulletin board. Nancy's been thinking about how to get the bin and plastic bags down the path to the pine tree. The recycling workgroup has also adjusted to a small sheet, where bags of plastic materials await pick-up.

The final rule of recycling — which includes what's brought from home — is that it's all about cleaning. "We're OK with plastic bags, but they must be clean. Aluminum cools and beer cans as well as others and NO to glass and white or opaque plastic." Tuna have to be labeled DRY (California Redemption Value), tuna, fresh, or frozen fish the lesson we don't want bottles is that glass is too heavy, making its value less than a much lighter can or plastic container."

One member of the recycling team, Jon May, sags what's in the bin every week. Nancy empties the bin and sorts the contents (and removes any non-paper bags holding recyclables). The task also entails separating the aluminum cans and putting them in an empty white trash bag from the shed and then weighing the bag. Nancy has a scale at home for the task. Nancy's a few people is to help on a workday. When the shed is full of bagging bags, she calls the Garden Master who takes care of getting them picked up and taken to the recycling center.

OVF members are encouraged to bring all their aluminum cans and clear plastics to the bin – every item helps to provide a nice amount for the budget. "It's gratifying to know how much money it makes," says Nancy. "That's our reward for the effort we put into the task."

## August Articles

### The Master Gardener Citrus Care Class Takes to the Trees

On August 9, Master Gardener Orchard Group Lead Daniella Rovella taught a hands-on class on citrus tree care. After a discussion in the meeting area, the class went into the garden and Daniella demonstrated the lessons in the proper citrus care and responsibility to prevent citrus problems.

One of Daniella's topics was protecting citrus tree trunks from sunburn by painting the trunk with a diluted latex paint. After the class, Orchard member Jeanne Lee and member Fan Wattis took Daniella's advice and painted the orchard tree trunks.

### DID YOU KNOW?
### The Shredding Pile is Periodically Excavated To Remove Soil Dropped by Members

As gardeners, we spend a lot of time building and conditioning our soil. We add compost and mulch, and when it's time to start a new crop, we take our soil to the next level by digging it up and turning it over. The goal is for the soil to find remove as much valuable soil as possible from the roots. Otherwise, we're losing our valuable soil when we dump it in the shredding pile along with our old plants.

And what happens to all that soil that comes along with the plants to the shred pile? It falls down on the pile and builds up the soil level under the shred pile. Then OVF member Bob Gallion has to use the tractor to dig out the soil that has accumulated under the pile. The shredding pile is sloped and contoured until the next time the soil level gets too high.

Please save your soil and keep as much of it as possible in your plot, and not the shred pile.

### OVF Welcomes
### UCLA Film School Students

On August 11 — a beautiful Monday afternoon — OVF hosted first-time visitors from UCLA's film school. Their mission: to shoot footage for the story of a young woman who finds happiness from her unexpected gardening job and observing life in a garden. FilmLA leased a permit to the filmmakers. Thanks to Dean Cleverdon for his assistance.

Contact OVF President Shirley Verrate at ecwvft7@gmail.com if you have questions about filming at OVF.

## Recipes from the Garden

*Here's a recipe contributed by OVF gardener Rachel L. Judd. Have a recipe using garden ingredients you'd like to share? Email it to ovfdeb@gmail.com*

It's been a hot summer, but nothing beats the heat like a cool glass of lemonade. This recipe is for a country fair style of lemonade, where lemon juice is combined with sugar and water to make a simple syrup that's diluted. This marinating draws out citrus oils into the sugar, giving the finished drink a more intense lemon flavor. Meanwhile, the addition of oranges (a Victorian innovation!) helps sweeten the drink naturally, cutting down the need for more sugar.

This recipe can be made using sugar substitutes like stevia or monkfruit. But a little cane sugar is magic on the palate.

Mint is an optional addition. You can also make an Arnold Palmer by cutting the lemonade with iced tea, or muddle some strawberries or raspberries for a fruity lemonade. Lemonade is a great way to use those extra lemons from your garden, double the limes, and add in 1/2 Tbsp of fresh peeled and chopped ginger instead of mint (don't marinate the ginger peel, just the ginger root).

### Rachel's Lemonade

Yield: 8-10 glasses

Ingredients:
6-8 medium lemons
1 cup white cane sugar (blood oranges also work but will affect the color of your lemonade)
3/4 cup granulated white sugar
Fresh ice
Water to taste

Optional:
1 bunch mint
1 cup granulated white sugar
1 cup water

Process:
Using a vegetable peeler, thinly peel the lemons and oranges. Try to avoid the white pith. You don't need to fully peel each fruit, maybe 1/3 of the fruit.

Toss the peels in the sugar, and let stand at room temperature for about 1-2 hours.

Juice the lemons and oranges. Combine the juices in a pitcher and set aside (in the fridge is ok).

When the peels are done marinating, add sugar and peel mixture to a small saucepan. Add 1 cup water and a pinch of salt. Gently heat the saucepan until the sugar has dissolved. Turn off the heat.

Let cool, then strain the peels out. You can make a nice candy by simmering the peels in more sugar syrup, otherwise toss them into the compost bin. Add the strained syrup to the juice. Dilute with water to your preferred taste.

Mint:
Roughly chop the mint. Stir together the water, mint, and sugar in a small saucepan on medium heat until the sugar dissolves. Remove from heat, let cool, strain, then stir into the lemonade.

Let some cool ice. Garnish with mint sprigs or small slices of fresh or candied lemon.

## The 11/30 Workday is Cancelled

**PLEASE NOTE THAT THE NOVEMBER 30 WORKDAY HAS BEEN CANCELLED FOR THE THANKSGIVING HOLIDAY**.

Please enjoy Thanksgiving weekend with your friends and family.  The November 30 workday has been cancelled to allow all OVF members the time to spend the holiday with their loved ones.

## Member Feedback / Submissions

If you have any feedback or comments on the newsletter, please contact the OVF Education Chair Debra Kaufman at ovfdeb@gmail.com.

## Land Acknowledgement

Ocean View Farms recognizes that we garden on land originally and currently inhabited by the Chumash, Kizh, Tongva, and Serrano peoples.  We respect them as the first caretakers of this land, with gratitude for their wisdom and skills.
